Note : Since this is a freeware file we don't offer any form of support, please don't contact us with questions regarding this item. We only offer support for our commercial files.

Directories

1 – Source FLA - original source files, you do not need to upload any of these to your server. Use these to change the code or edit graphics and export a new swf

2 - Published SWF – published swf file, html file, js code for embedding the swf, xml sample file; these are the files you need to upload to your server.

3 - Help Files – contains the help and font information documents.

Overview

Roll mouse over the movie clip or button to see the tooltip. Cutomize tooltip by editing the assets from the library. Also change variables in the ToolTip.as just bellow the "CUSTOMIZE" line.

How to use it?

Just include the Library folder "**Tool Tip**" in your project, then write this line of AS: **#include 'MCToolTip.as'** . Create a MovieClip or Button and put the following code for it:
my_mc.tip("**Some text**"); Compile and enjoy.

You should know that the showing and hiding of the tooltip uses the onRollOver, onRollOut and onDragOut events. So instead of overwriting these events simply just write the event name with **underscore** like: **_onRollOver**. Now you can still use those events and also display a tooltip.

We hope you enjoy this free flash file from Oxylus Flash !
