

# Part 2: Working with Figures

## Shape Corners

Many shapes can be customized by using the Corners slider which can be tweaked using the Shape inspector or the new, incredibly handy { and } keyboard shortcuts.

### Left Signpost and Right Signpost

The new Left Signpost and Right Signpost shapes are special and actually contain 4 different shapes (each) depending on the Corner value. Here is the Left and Right Signpost morphing between their 4 shapes based on increasing Corner value.

### Underline

The Underline shape is also special and contains 10 different shapes depending on the Corner value, as shown below.
