# Part 8: The Curio Shelf

Inspector Shelf

Use the Inspector shelf to change idea space and figure properties. Alternatively you can use the inspector popovers as discussed earlier.

The Inspector shelf contains many of the more complex inspector popover controls such as shape, coloring, lists, etc.

You can keep this shelf visible to quickly access common properties and attribute settings.

This means that Curio has three methods for changing properties:

1. Inspector Popover — click to reveal the popover; only appears when needed so you can concentrate on your work.
2. Inspector Detached Popover — drag within the popover area to tear it off and convert it into a floating utility window which you can place anywhere on any of your screens.
3. Inspector Shelf — easy access to many popular controls directly from the shelf.
