Part 9: Miscellaneous Features

Alignment and Distribution

Curio has several methods to lay out your figures.
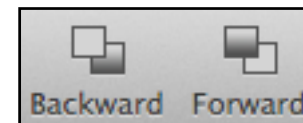

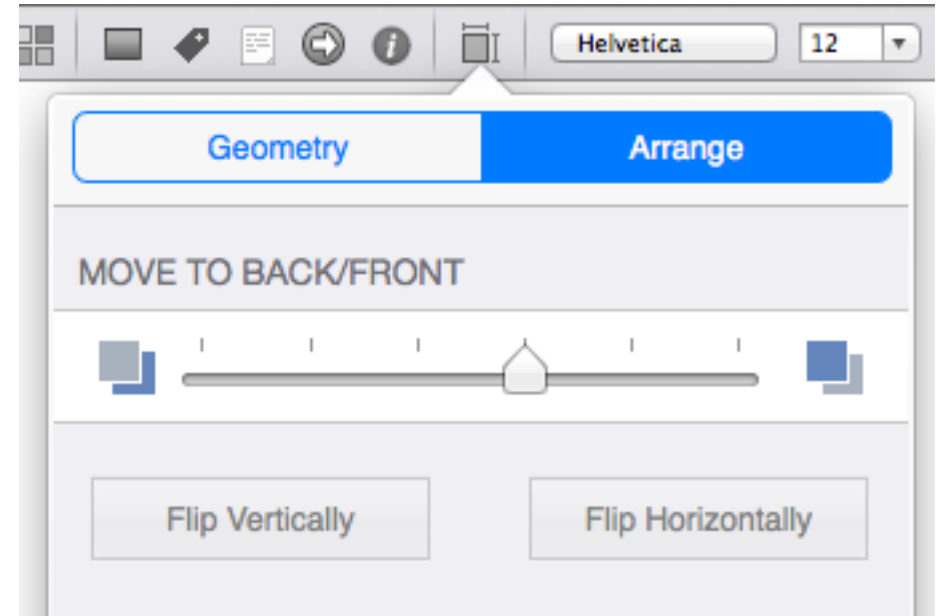

Snap Guides
When dragging items around their edges and centers can snap into alignment when enabled via the Arrange > Edge Snap and Arrange > Center Snap menu items.

Alignment
Use the Arrange > Align menu to align several selected figures together, or, if only one figure is selected, it will be alignment within the idea space itself.

Distribution
Use the Arrange > Distribute menu to evenly spread items within the region defined by the selected figures.

Customize your toolbar (via right-click) and add a Backward/Forward buttons for quick figure arrangement. If Shift is pressed then the selected figures are brought all the way to the back or front.
