# Part 2: Working with Figures
WebViews & Google Docs

Selecting a WebView figure, or a web link stored directly in the Organizer, will reveal a new web surfing bar up in the inspector bar area so you can control your web browsing experience for that web view. Double-clicking a WebView activates it and begins the web browsing session within the WebView until you stop browsing by clicking the button in the inspector bar.

You can also Insert > WebView or Insert > Google Doc to insert a new WebView into the idea space.
